TO WHOM IT MAY CONCERN:

ASSOCIATED BATTERY MANUFACTURERS (EA) LTD. - TESTIMONIAL

Associated Battery Manufacturers (EA) Ltd manufactures car batteries and receives raw materials in trucks which require passing on the weighbridge to determine the actual weights delivered. In addition, the weighbridge is also used to determine the weight of the raw materials being used during the battery manufacturing process.

Some times in 1998, we contracted Bytronics Weigh Scales to replace our weighbridge deck, the Weighing Indicator and calibrate the weighbridge. At the same time we required a weighing software that was capable of storing automatically all the weighing transactions in a database, producing periodic reports, printing ticket showing first weight, second weight and net weight using the ordinary printer. Bytronics Weigh SOFT, a weighbridge software was installed and immediately the management of the weighbridge improved tremendously.

We are now able to refer to the weighbridge historical data and produce reports. Since that time Bytronics Weigh Scale have been maintaining both the weighbridge and Weighing software.

Yours faithfully,

For: **ASSOCIATED BATTERY MANUFACTURERS (EA) LTD.**
