BYTRONICS ANTI-TAMPER SOFTWARE

The primary objective of this IoT monitoring system is to:

- Detect and report tampering activities such as enclosure opening and unauthorized calibration attempts.
- Monitor scale power status .

FEATURES

- Tamper Detection: The device instantly detects any tampering activities to open it or mess with the calibration settings
- Real-Time GPS Tracking: The device can track exactly where the scale is, which is great for field or mobile use.
- Easy Online Monitoring: Everything is tracked on a simple dashboard — from activity logs to alerts, whether you're managing one unit or many across the country.
- The device is built to fit perfectly into hanging scales and digital indicators — making it harder for anyone to carry out fraudulent calibration or tampering.

- Track the device's location via GPS.
- Complement the physical Weights and Measures seal with an electronic traceable activity log.
- Provide a cloud-backed interface for monitoring activities across regions and nationally.

The device can be fitted in hanging scales, digital indicators to deter fraudulent calibration of weighing scales with the aim of stealing. It is currently approved to be fitted to

- BWS-HTR 150 and BWS-LP7651 hanging scales.

BENEFITS

- Real-time Notifications:
The device automatically sends you alerts via text or email, so you're always in the know.
- Remote Monitoring:
You can check the scale's activity and any tampering events from anywhere, ensuring you stay updated without being on-site.
- Time and Location Stamps:
Every tampering attempt is logged with the exact time, date, and location, giving you clear and detailed records.
